No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Published Applications NA:*

REFERENCE 1 (bases 1 to 532)  AUTHORS Hall,N., Bowman,S., Lennard,N.J., Doggett,J., Atkin,R.,  Chillingworth,C., Ormond,D., Harris,B., El-Sayed,N., Hou,L.,  Melville,S.E., Rajandream,M.A. and Barrell,B.G.  TITLE Direct Submission  JOURNAL Submitted (10-DEC-2000) Trypanosoma brucei genome sequencing  project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton,  Cambridge CB10 1SA, E-mail: barrell@sanger.ac.uk and  nhissanger.ac.uk	COMMENT Constructed at the Institute for Genomic Research (TIGR), Rockville, MD. Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREUSA74 GUTat 10.1) was mechanically sheared to give a tight size distribution ( 4 kb). The v+ i method used for the library construction is described in detail in Smith, H. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barrell, Oxford University Press, 1999). Email: nelsayed@tigr.org Details of T. brucei sequencing at the Sanger Centre are available at http://www.sanger.ac.uk/Projects/T_brucei/.

Genomic DNA, isolated from a cloned population of
Trypanosoma bruce; (TREU227/4 GUTat 10.1) was mechanically
sheared to give a tight size distribution (approx 2 kb).
The v + i method used for the library construction is
described in detail in Smith, H.O. and Venter, J.C.
(Making small insert libraries for whole genome shotgun
sequencing projects. In Genome Sequencing: A Practical
Approach, eds. M. Vaudin and B. Barell, Oxford University
Press, 1999)."

Clones are derived from the Trypanosoma brucei GUTat 10.1 sheared
DNA library constructed at TIGR. Clones will be available for
DNA library constructed at TIGR. Clones will be available for
distribution through ATCC. Sheared DNA end sequences search page:

Site_2: Not I; The library was constructed according
Bonaflo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a i% agarose
gel. First strand CDNA synthesis was primed with oligo-dr
primer containing a Not I site brack entropy as size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCGAGACAG. This library was created for the University
lows Brain Anatomy Project (BMAPP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mentell Health (NIMH), Hemin Chin, Ph.D.,
